## **Transcription Velocity™ - Practice Velocity's Digital Voice Solution**

### **Now you can fully integrate your dictation with patient records using Transcription Velocity™**

Transcription Velocity captures your voice dictation and automatically links the digital audio file to the patient record — the patient record you generate when you scan the Practice Velocity paper template (PiVoT).

Wherever and whenever you have Internet access, you can dictate your charts. Quickly see which charts require transcription, click on the patient name and begin speaking! Transcription Velocity records your voice into an audio file. A typed transcription is quickly generated for immediate fax or printing.

### **Cut Your Dictation Time and Costs in Half**

Saving time and money is a major goal of the entire Practice Velocity product group — and Transcription Velocity saves you both. The Practice Velocity computer actually generates a text string each time you check a normal finding on the Practice Velocity template (PiVoT). Simply dictate abnormal or unusual aspects of the patient visit. You save time; and the automated process allows Practice Velocity to generate your transcription at a cost much lower than the going rates.

### **Fast, Fast, Fast**

Transcription Velocity is designed to be **fast** — turnaround time can be less than an hour! In fact, Transcription Velocity is so fast that, in a worker compensation case for example, we can often have a completely typed medical report faxed back to the employer before the employee arrives back at the worksite!

### **Integrated with Coding Velocity**

Transcription Velocity is integrated with Coding Velocity — the patent-pending medical charting system that improves documentation, automates coding, increases revenue capture and provides advance audit protection.

### **Developed by Doctors for Doctors**

Transcription Velocity augments the benefits of Coding Velocity —enabling you to rapidly add detail to the PiVoT - the Practice Velocity Template - a comprehensive, flexible paper “check-box” chart used by physicians and nurses to record the patient visit. The PiVoT substantially shrinks documentation time and reduces handwriting requirements. When you scan a PiVoT with the “transcribe” check-box checked, the software automatically alerts Transcription Velocity to prepare the patient chart for access. Whenever you wish, simply pick from the cue of charts awaiting transcription and begin recording.

### **Access Your Transcription Velocity Account**

You can access your account as well as any other Practice Velocity account — 24 hours a day, seven days a week using the Practice Velocity web site. There has never been an easier, more convenient way for you to seamlessly document and code a patient visit.
